M.PH, Supervisor II: Dr. Atti Yudiermawati, S.Kp, M.Pd***

*Stunting is a nutritional problem in children that causes children to experience growth failure caused by chronic malnutrition so that children are shorter in age. Maintaining nutrition during pregnancy is very important so one thing that must be considered in maintaining the nutrition of pregnant women is consuming blood supplement tablets during pregnancy. The research method used was quantitative with a pre-experimental design with one group pre-post test. The sample for this research was 30 husbands of pregnant women in RW.11 sub-district with sampling using total sampling. This research instrument uses a questionnaire to collect data on the husband's knowledge of pregnant women. The test used is the Wilcoxon Test. The results of the Wilcoxon statistical test on pre-test and post-test respondents showed  $p = 0.000$  or  $p < 0.005$ , namely that there was an effect of health empowerment using poster media on husbands' knowledge of pregnant women's compliance with consuming blood supplement tablets in Lowokwaru RW.11 sub-district which was expected by respondents. can implement compliance with consuming blood supplement tablets.*
