

ABSTRACT

Implementation With Humanistic Approach: Occupational Therapy Of Life Of Schizophrenia Patients Mrs. W With Auditory Hallucinations In The Ardimulyo Health Center Work Area. Amelia Kususma Purnamasari (2024). Malang Nursing Profession Study Program, Nursing Department, Malang Health Polytechnic. Supervisor Esti Widiani, S.Kep., Ns., M.Kep.

Introduction: *Sensory perception disorders are one type of mental health disorder. Hallucinations require appropriate therapy so that they do not negatively impact sufferers. One therapy that can be given is occupational therapy. This case study aims to analyze the implementation and results of nursing care implementing the Humanistic Approach: Occupational Therapy in controlling hallucinations.*

Methods: *The design of this case study focuses on case studies based on the nursing care process including assessment, nursing diagnosis, nursing interventions, nursing implementation and nursing evaluation. This case study is in the form of nursing care for clients with hallucinations through the implementation of the Humanistic Approach: Occupational Therapy.*

Results: *Based on the results of the case study, it was found that there was a problem of hallucinations that was given the implementation of the Humanistic Approach: Occupational Therapy. After 3 days of intervention, there was a decrease in hallucinations and an increase in the client's adaptive coping.*

Discussion: *Hallucinations require special interventions that can control the sufferer's hallucinatory behavior, so in dealing with the problem of hallucinations experienced by schizophrenia patients, a form of novelty or innovation is needed that has not been done before, one of which is the Humanistic Approach: Occupational Therapy.*

Keywords: *Hallucinations, Humanistic Approach, Occupational Therapy*
