**Background:** *Institutional food management can be divided into commercial and non-commercial sectors. One example of an institution that conducts large-scale non-commercial food management is an orphanage. The aim of this management is to ensure the quality and taste of the offered food to attract consumers while keeping food costs at an appropriate level without sacrificing the quality of service and food for consumers. In Indonesia, cases of food poisoning due to food handlers' lack of knowledge about food hygiene and sanitation are still common. In addition to the hygiene and sanitation behavior of food handlers, their knowledge and attitudes regarding hygiene and sanitation are also crucial factors in ensuring the success of safe and healthy food processing.*

**Research Objective:** *To determine the knowledge, attitude, and hygiene sanitation behavior of food handlers at the Ulin Nuha Orphanage in Sidoarjo.*

**Method:** *This research is a descriptive survey study using closed-ended questionnaires, which have pre-determined answer choices, and observation sheets.*

**Conclusion:** *1). The knowledge of food handlers about food hygiene and sanitation at the Ulin Nuha Orphanage in Sidoarjo shows that out of a total of 9 food handlers, 1 person (11%) has poor knowledge, 1 person (11%) has fair knowledge, and 7 people (78%) have good knowledge about hygiene and sanitation during food processing. 2). The attitude of food handlers towards food hygiene and sanitation at the Ulin Nuha Orphanage in Sidoarjo shows that out of a total of 9 food handlers, 9 people (100%) have a positive attitude regarding hygiene and sanitation during food processing. 3). The behavior of food handlers regarding food hygiene and sanitation at the Ulin Nuha Orphanage in Sidoarjo shows that out of a total of 9 food handlers, 9 people (100%) have good behavior related to hygiene and sanitation during food processing.*

**Keywords:** *Hygiene Sanitation, Food Handler Behavior, Food Handler Attitude, Food Handler Knowledge*
