

## ABSTRACT

**Safitri, Dinar Eka. 2024. *The Factors that Related to Visits by Mother of Toddler at Posyandu RW 6 Klojen Village, Rampal Celaket Community Health Center Working Area Malang City, Skripsi, Kemenkes Poltekkes Malang, Applied Health Promotion Study Program, Supervisor I : Pudji Suryani S.Kp., MKM., Supervisor II : Drs. Moh. Zainol Rachman, SST., M.Kes***

*Posyandu is a UKBM (Community Resource Health Effort) which functions as a basic health service to prevent high Maternal Mortality Rates (MMR) and Infant Mortality Rates (IMR). If mothers of toddlers do not visit the posyandu regularly, the growth and development of toddlers will not be monitored properly. The achievement of posyandu visits is related to several factors including predisposing (knowledge & attitudes), enabling (travel distance, infrastructure), and reinforcement (family & cadre support). The aim of this research was to determine the factors associated with visits to Posyandu RW 6, Klojen Village. The research is an analytical correlation with a cross-sectional design using the Chi-Square method in hypothesis testing. The research population was all mothers of toddlers in Posyandu RW 6, Klojen Village. The research sample consisted of 45 people using the Total Sampling technique. There are 5 variables that are statistically related to posyandu visits, namely knowledge (p-value = 0.000), attitude (p-value = 0.020), distance traveled (p-value = 0.000), family support (p-value = 0.000) and support. cadre (p-value = 0.000). However, the infrastructure variable was not related to posyandu visits (p-value = 0.711). The conclusion is that there is a relationship between knowledge & attitudes, distance traveled, family & cadre support and visits by mothers of toddlers at Posyandu RW 6, Klojen Village. It is hoped that mothers of toddlers will visit the posyandu regularly so that the toddler's health is well monitored.*
