Cases of early marriage are common in Indonesia and have an impact on the quality of family life and readiness to become parents. The age of young marriage has an impact on the readiness to become parents where there is a change in the role of teenagers to parents. Based on data from the Surabaya Religion High Court (PT) for 2022 the highest number of requests for dispensation to marry is Malang Regency with 1455 cases. The purpose of this study was to describe the readiness to become parents in third trimester pregnant women with early marriage in the working area of the Dau Health Center, Malang Regency. The research design uses a Quantitative Descriptive with a cross sectional approach. The population consisted of 31 III Trimester Pregnant Women with Early Marriage in the Working Area of the Dau Health Center in May-June 2023 using a total sampling technique. Data collection using a questionnaire. Data analysis used in this research is descriptive statistical analysis in the form of frequency and percentage. The results of the study as much as 58% are ready to become parents. In the category of psychological readiness to become parents as much as 65%, physical readiness to become parents as much as 58%, socio-economic readiness as much as 35% are not ready to become parents. The study concluded that more than half of third trimester pregnant women with early marriage in the May-June 2023 period in the Dau Health Center Working Area were ready to become parents.
