*In 2021, scabies disease ranks eighth out of the ten most common types of diseases in Malang regency with a total of 6,623 cases (Malang regency one Data, 2022). Pondok Pesantren Salaf Al-Qur " an (PPSQ) Ash-Syadzili 2 is included in the working area of Puskesmas Pakis. In the past year, there were 110 special cases of scabies in the region (health profile of the Fern Health Center, 2022).The type of research used is quantitative research using quasi-experimental research design and the design of pre-test-post test with control group design to determine the effect of scabies prevention education on the knowledge and attitudes of santriwati in Islamic Boarding School Salaf Qur'an (PPSQ) Ash-Syadzili district pakis Malang. The results of the pre-test and post-test that has been done is known that the results of the Wilcoxon test on knowledge and attitude variables show significant numbers with significance values (2-tailed)  $p < 0.000, 0.05$ . The results of the study santriwati attitude after intervention and post test as many as 56 santriwati have a positive attitude of (100%). There is an effect of scabies prevention education on the knowledge and attitude of santriwati in Islamic Boarding School Salaf Qur'an (PPSQ) Asy-Syadzili District Pakis Malang regency, between before and after the intervention through different educational media. Activities related to personal hygiene and the boarding school environment need to be carried out regularly so that scabies prevention efforts are more optimal.*
