Title : Medical Resume Form Design Creation at Intan Husada
Jatirogo Inpatient Clinic In 2023

Intan Husada Jatirogo Inpatient Clinic does not have a medical resume form yet. This is because from the beginning of the establishment of the clinic there was no medical record officer, so the management of medical record documents, especially medical resume forms, has not been implemented. Therefore, this research was conducted in order to produce a medical resume form design that can later be applied in the clinic. The research method used is Research and Development (R&D). Research and Development is a method for producing a new product or developing and perfecting an existing product. The results of the evaluation using the TAM (Technology Acceptance Model) Test approach based on a questionnaire from seven respondents found that for Perceived Ease Of Use as much as 33.33% answered strongly agree and 66.67% answered agree. For Perceived Usefulness with the highest percentage 77.78% strongly agree that the design of the medical resume form is in accordance with the information needed by the user. For Behavioral Intention To Use 66.67% agree that the design of this form can motivate users to complete medical resume forms and can increase the number of complete medical resume forms. For Actual System Use 88.89% agree that the design of this form is in accordance with the expectations and desires of users. Because most of the respondents answered that they agreed with the statements in the questionnaire, the results of the creation of the medical resume form design by the researchers could be applied at the Intan Husada Jatirogo Inpatient Clinic.
