

## **ABSTRACT**

Name : Muhammad Nauval Amrullah  
Study Program : D-3 Medical Records and Health Information  
Title : Completeness and Accuracy of the Code of Medical  
Actions for Inpatients at Kanjuruhan Hospital

Lack of completeness and accuracy of the action code performed by the coder in the inpatient medical record document. Therefore this study aims to identify the completeness and accuracy based on the ICD 9 CM at Kanjuruhan Hospital. The method used in this study uses a descriptive quantitative research type with a cross sectional approach. The data analysis used was using univariate analysis, the samples were taken using probability sampling technique and the results obtained were 97 samples. Based on the results obtained, the completeness of medical action writing in inpatient medical record documents was 46%, while the incomplete writing was 54%. The accuracy of the action code is 45%, while the inaccuracy of the action code is 55%. It is hoped that there will be a need to make SOPs regarding the completeness and accuracy of medical procedures in inpatient medical documents in accordance with the ICD 9 CM.

Keywords: Accuracy of action code, writing constancy  
SOP for Accuracy, SOP for Completeness.
