ABSTRACT

Endimas Fiki Ramadhan (2025). Nursing Care for CVA Clients in the Stroke Unit of Dr. Soedomo Trenggalek Hospital. Scientific Paper Case Study, DIII Nursing Study Program Trenggalek, Nursing Department, Health Polytechnic, Ministry of Health, Malang. Advisor: Ns. Rahayu Niningasih,S.Kep.,M.Kes

Nursing Care for CVA Infarction is a condition when blood flow is blocked in the brain which usually occurs after physical activity or because of psychological influences caused by thrombus or embolism in the blood vessels in the brain. The purpose of this study was to provide nursing care and analyze based on theories and facts for CVA Infarction clients in the Stroke Unit of dr. Soedomo Trenggalek Hospital. The research design used was descriptive qualitative with a case study approach. The participant criteria were one client who experienced CVA infarction with composmentis consciousness without comorbidities and experienced extremity weakness. The analysis was carried out by looking for gaps in theory and facts found in the client's condition. The results of the study showed that there was a match and gap between theory and facts. Gaps were found in previous medical history, family medical history, general examination, vital signs, head and face examination, genitalia and anus examination, neurological examination, interaction and communication patterns, rest and sleep patterns, elimination patterns, eating patterns. The researcher formulated 2 nursing problems, namely the risk of ineffective cerebral tissue perfusion and impaired physical mobility. Interventions are compiled based on literature sources and implemented according to standard operating procedures at the case collection site. Implementation is carried out according to the interventions that have been compiled. And evaluations are carried out for 3 days with problems resolved in each diagnosis that arises. CVA Infarction requires a long recovery period, so intensive and ongoing care is needed.
