ABSTRACT

Zaky Al Dani Ramadhan (2025). Nursing Care for client with Pulmonary Tuberculosis (TB) at Anggrek Room of Trenggalek dr. Soedomo Hospital. Scientific Paper Case Study, DIII Nursing Study Program Trenggalek, Nursing Department, Health Polytechnic of the Ministry of Health Malang. Advisor: Elok Yulidaningsih, S. Kep., M. Kep

Nursing care for Pulmonary TB is a comprehensive service including assessment, diagnosis formulation, intervention, implementation, and evaluation of nursing care for clients who experience infectious diseases caused by Mycobacterium Tuberculosis which attacks various organs, especially the lungs. The purpose of this study was to provide Nursing Care for clients with Pulmonary TB in the Anggrek room of Dr. Soedomo Trenggalek Hospital.

The design or plan in this study is descriptive qualitative with a case study approach regarding Nursing Care for Clients with Pulmonary Tuberculosis comprehensively. The participants in this study were one client who had Pulmonary Tuberculosis. Data analysis was carried out by comparing the gap between theory and facts. Based on the results of the study, there was a gap between theory and facts found.

The results of the assessment found a gap in family health history and daily activity patterns of eating and drinking. There were two nursing diagnoses found. The diagnoses that emerged included Ineffective Airway Clearance related to retained secretions, Acute Pain related to physiological injury agents. Interventions were arranged and adjusted based on theories from the literature. Implementation was carried out based on the needs of the client's condition.

The results obtained from this study were that patients with Pulmonary Tuberculosis required recovery that took a short time, so intensive and continuous care was needed.

Keywords : Family Nursing, Pulmonary Tuberculosis.
