**Alfaradis, Revarizqi Nurhabibah, 2023. *Description of Mother's Knowledge About Post Partum Hemorrhage at Kedungkandang Health Center in Malang City. Thesis, Bachelor of Midwifery Study Program Malang. Health Polytechnic of the Ministry of Health Malang. Main Advisor: Ibnu Fajar, SKM., M.Kes, Companion Advisor: Desy Dwi Cahyani, SST., M.Keb.***

*Hemorrhage post partum is still the biggest cause of maternal mortality. Most maternal deaths in 2020 were caused by bleeding, which was 1,330 cases. One of the preventive efforts that can be done by mothers to reduce the risk of hemorrhage postpartum is to increase knowledge about postpartum hemorrhage. The purpose of this study was to determine the Description of Mothers' Knowledge about Hemorrhage Postpartum at the Kedungkandang Health Center, Malang City. The design of this study was a descriptive study with a cross-sectional approach with a sample of 50 people in this study. The sampling technique used in this study was the total sampling method. The variables studied were Mothers' Knowledge about Hemorrhage Postpartum with sub-variables: age, education, occupation, and parity which were collected using a questionnaire instrument. The results showed that 47 (96%) WUS at the Kedungkandang Health Center, Malang City, were mostly knowledgeable. Good knowledge about postpartum hemorrhage causes high maternal readiness in facing pregnancy, childbirth, and postpartum as well as readiness in early detection and overcoming health problems that arise.*

***Keywords: hemorrhage postpartum, women of childbearing age.***
