

## ABSTRACT

Nabila Diah Putri Arianti (2025). *A Case Study on Midwifery Care for Postpartum Mothers with Preeclampsia in the Postnatal Ward of RSUD Sidoarjo Barat. Scientific Writing - Case Study. Diploma III Midwifery Study Program, Department of Midwifery, Health Polytechnic of the Ministry of Health Malang. Supervisor : Asworoningrum Yulindahwati, S.ST., M.Keb.*

*Preeclampsia is a complication that can occur during pregnancy, childbirth, and the postpartum period. If postpartum preeclampsia is not promptly managed, it can lead to eclampsia. The purpose of this study is to identify postpartum women with preeclampsia and its impact on maternal health. This research is a descriptive exploratory case study involving one subject—a postpartum woman with preeclampsia who was treated in the postpartum ward at West Sidoarjo Regional General Hospital (RSUD Sidoarjo Barat) on June 23, 2025. Data collection was carried out using a guided free interview technique with instruments including a midwifery care form for postpartum mothers, an observation sheet, informed consent, and a pre-prepared Standard Operating Procedure (SOP). The data are presented in narrative form. The results of the study show that the researcher was able to provide optimal monitoring and midwifery care to Mrs. "R". Proper management and intensive monitoring are essential to prevent further complications.*
