ABSTRACT

[Corelation Between The Accuracy Of Diagnosis Writing And The Accuracy Of Diagnosis Codes In Obstetric Cases at Aisyiyah Islamic Hospital Malang City]. [Aliva Risma Falisti (2024)], [Final Report], [Diploma Three in Medical Records and Health Information], [Medical Records and Health Information], [Health Polytechnic Ministry of Health Malang], [Elystia Vidia Marselina, S.ST, M.Kes], [Puguh Yudho Trisnanto, S.Kom, MM]

Correct diagnosis writing refers to the medical terminology ICD 10 Revision 2010 is very important to obtain accurate disease codification to support medical information reporting. This study aims to analyze the relationship between the accuracy of diagnosis writing and the accuracy of obstetric case diagnosis codes. The method used in this study is quantitative research through analytical observation with a cross-sectional approach. The study was conducted at RSI Aisyiyah Malang City using 87 samples taken through simple random sampling techniques with the accuracy of diagnosis writing as the independent variable and the accuracy of diagnosis codes as the dependent variable. This study uses a checklist sheet as a research instrument. The accuracy of diagnosis writing and the accuracy of diagnosis codes were analyzed univariately and the relationship between the accuracy of diagnosis writing and the accuracy of diagnosis codes was analyzed bivariately with the help of SPSS through the chi-square test. The results of the study showed that from 87 (100%) samples, 63 (72.4%) documents found accurate diagnosis writing, 45 (51.7%) documents found accurate diagnosis codes, and a relationship was found between accurate diagnosis writing and the accuracy of obstetric case diagnosis codes at RSI Aisyiyah, Malang City with a p value = 0.034 ($p < 0.05$).
